

CHARLOTTE EYE  
EAR NOSE & THROAT  
ASSOCIATES, P.A.

**Acrysof ReSTOR® and AMO ReZoom™**  
**Cost Information for Cataract Surgery**

A diagnosis of cataracts is to your advantage if you are choosing multifocal lenses, ReSTOR and ReZoom.

The price of the cataract procedure using these premium lenses is \$3995 per eye. **The good news is that because of your cataract diagnosis, Medicare or your medical insurance will cover about 55% of the procedure. You will only be responsible for the price of the lens, which is \$1995 per eye, as well as any additional deductibles or copays.**

Since everyone's insurance situation may be different, our surgical counselor will help you calculate a more accurate out-of-pocket estimate prior to scheduling the surgery.

Your cataract diagnosis reduces the cost of this surgery and allows you to benefit from this state-of-the-art lens technology for a very affordable price.

**If you are FILING Medical Insurance/Medicare:**

**\$1,995.00 per eye / \$3990.00 both eyes Covers Surgeon/Facility/Lens Fee**

This is **in addition to** any copays, deductibles, or costs associated with cataract surgery that are not covered by your insurance.

Includes implant fees as well as postoperative care and visits for 90 days; also astigmatic surgery (LRI), pachymetry, and topography when indicated.

Does **not** include: glasses, contact lenses, any implant exchanges, or any laser vision correction procedures

**Please Note:**

1. Payment for all charges, additional to insurance coverages as listed above, will be required before surgery can be scheduled and the lens implant ordered.
2. Separate payments will need to be made for the surgery center, surgeon fees, and anesthesia where indicated.
